WHEN YOU SEE
A LITTLE BROWN
BUNGALOW IT'S A
KENYON-TAKE
DOWN HOUSE

N A T U R E

—To me thou art a thing both large and small, as small, thou art a bee, a golden, brightened thing, o'erflowed with honey —too much—so its taste is often harsh and something of a sting dwells in the melody I hear thee chant because I always long for thee.

As large, thou art an orb; a sun of warmth that comes, dear Nature, thine, from God's own heart to cling us to thee so.

Majestic pines like fingers upward point, and show their guerdon—odors sweet—that come as from the skies, and upward from thy bosom creep in reverence lest thy beauty be enhanced and their sweet fragrance left alone—by thee —thou Mother of us all.

DURING last year one thousand KENYON TAKE DOWN HOUSES enabled the same number of families to know the joys of passing an ideal summer in a home that they had taken where they wished.

In 1911, the year before, five hundred and fifteen families enjoyed these same comforts offered by the advantages of the Kenyon Take Down House. In 1910, there were but fifty-five houses built, these having been the result of the impression made by the one lone house that was constructed early in the season, which year marked the beginning of the great Kenyon industry.

This year, thru the enlarged plant with its extended facilities, there will be two thousand of these brown bungalows shipped throughout the United States. This steady increase but exemplifies the hearty approval which the American Public has extended to KENYON TAKE DOWN HOUSES.

The responsibility of THE R. L. KENYON COMPANY can best be learned by referring to The Waukesha National Bank, The National Exchange Bank, R. G. Dun & Company, Bradstreet's Commercial Agency or any owner of a KENYON TAKE DOWN HOUSE.

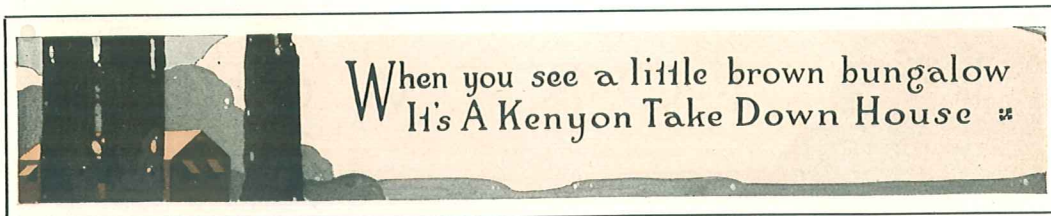

BEAUTIFUL WAUKESHA

We invite you, our reader, to our home city, Beautiful Waukesha—the gateway to the world famed South Wisconsin lake region, known everywhere for its health giving mineral waters, its sanitariums and summer hotels.

It is located eighteen miles West of Milwaukee—eighty-five miles North of Chicago and is reached from Milwaukee by Interurban Electric Service every hour, and from Chicago by morning and evening limited trains, making the trip in two and a half hours—via the Soo line without change, and the C. M. & St. P. and C. & N. W., changing cars at Milwaukee.

It will give us pleasure to meet any of our friends or prospective purchasers at any train or trolley, conduct them through our plant and show them a model village of Kenyon Houses, erected on our own grounds.

THE R. L. KENYON COMPANY.

A VISIT TO THE KENYON TAKE DOWN HOUSE MAKERS

The impressions of a visitor to the Kenyon Factory in a letter to a friend Name on request

I HAD accepted Mr. Kenyon's courteous invitation to inspect his new factory and I set out for Waukesha, whereupon arriving, his big touring car met me at the station. I was whisked through the picturesque little city towards the home of the KENYON TAKE DOWN HOUSE and, as we rounded a knoll, an interesting picture lay in the snow covered valley before me—a perfect village of little brown bungalows, each with it's homelike chimney sending up a ribbon of soft gray smoke, many with laughing little faces pressed against the windows as we swept by.

The snow was piled in drifts against the outer walls of the houses and yet, as I leaned from the auto and impolitely stared through a window, I saw a man sitting in his shirt sleeves, reading, with an air of such cozy contentment that I almost wished that he could be my host in place of those in the great plant which loomed up in the background.

Arriving at the factory Mr. Kenyon undertook to show me just how his Take Down Houses were made and I must confess that when I saw whole houses complete in every detail, quickly taken apart, secured in compact, convenient to handle bundles and loaded onto the waiting railway cars, I was in need of no explanation, nor further description of their absolute portability.

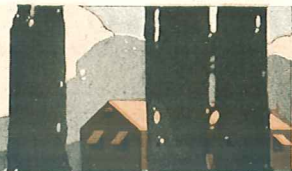

The sewing room with it's long rows of motor driven machines was what attracted me most. It was fascinating to observe the tough, heavy treated canvas glide from the enormous rolls, through the skilled hands of the operators to be joined with waterproof cord and made into one piece with windows and doors just where they were needed.

From the woodworking department there came section after section of finely made hardwood floors and each, as it passed an inspector, was examined in a most critical way for possible defects, before it was permitted to enter the great varnishing rooms, wherein the wood was first treated so as to make it almost everlasting and then covered with two coats of varnish.

Each house was set up complete in the large building provided for that purpose. Two

Every lover of outdoor living loves The Kenyon Take Down House ::

men set them up, regardless of size, with such remarkable rapidity that I involuntarily reached for my watch to time them. Each joint slipped into place and each piece had a large accessible thumb screw to hold it firmly and, at last, when the rich brown texture of the tightly drawn canvas completed the picture, I felt that, before my eyes and while I waited, a perfect home was made.

In crossing the yard to another part of the plant, we entered a finished house, which was one of several nearby. The wind was biting cold without and yet, when once inside the house, I sat down in front of the large bay window and wondered how it could be so very cold outside and yet so warm within.

I felt the tightly stretched walls and noted how the colors of partitions, ceiling and walls harmonized to produce a pleasing mission effect. And here and there were bedrooms. I entered one and it seemed that, through the ventilated ceiling, there came air—not a draft—but good, fresh, wholesome, invigorating air and yet the room was warm.

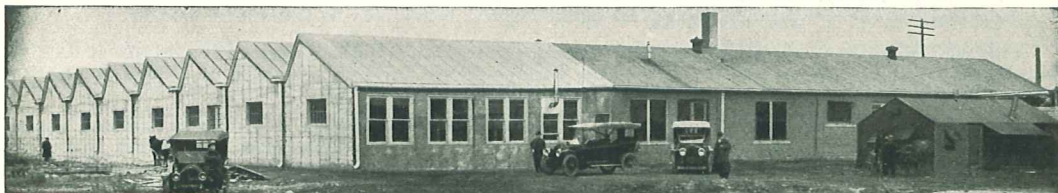

The kitchen and the bathroom and their portable utensils were unique in their nicety, as each thing seemed that it had just that space and had been told to make itself compact.

From there I saw the storeroom where Kenyon Houses, of every size, were all packed and ready for shipment the day ordered, so that Kenyon customers would not be kept waiting for the pleasures of real wholesome living where the air was pure and health giving.

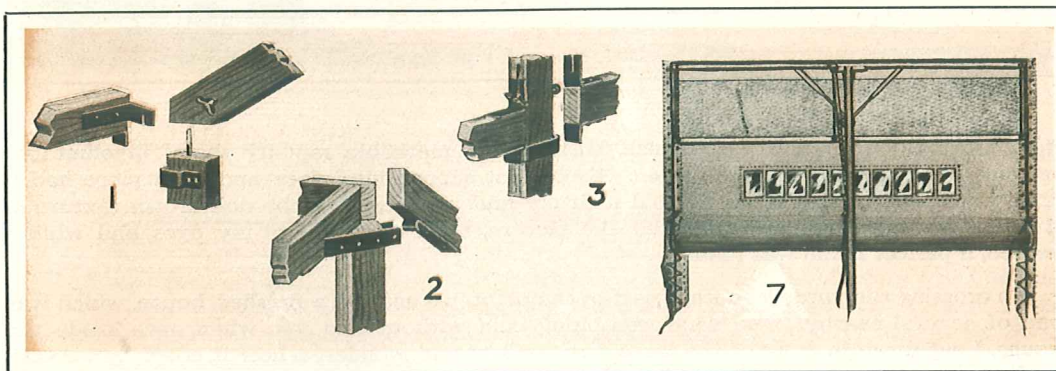

How many of us, we tired city folk, see the green woods just as we might? We seldom think that the cost of a summer's rent will buy a Take Down House and that instead of wishing for a better cottage or a different place to spend the summer, that we could take this same little brown bungalow right with us again, year after year, and there would be no rent for us to pay.

This ideal little home can be taken anywhere. We can put it up ourselves without even a carpenter to help us, in a few minutes or hours, depending on its size. We are not subjected to the inconveniences of "another man's house" because we have brought OUR OWN HOME right with us.

It is complete—perfect in every detail—and it means a real summer to have a portable KENYON TAKE DOWN HOUSE.

KENYON TAKE DOWN HOUSE

THE COMPONENT PARTS OF A KENYON HOUSE

THE FLOOR of the KENYON HOUSE is made in convenient sections, small enough to be carried and moved easily. By interlocking the under joist and joining with a bolt the floor is made as substantial as a permanent one. The material is the best quality Georgia Pine, carefully matched and laid, sanded smooth, varnished on top with two coats of Valspar Varnish, the best we can buy, and guaranteed to stand unlimited washing and not to turn white. The under side is creosoted, preserving the wood, keeping out dampness and making it poisonous to insects, vermin and germ life. Twenty-four inch stakes are furnished, which when driven into the ground, firmly anchor the house.

THE FRAME is of clear Washington Fir, stained a mission finish. The erection pictures on pages eight and nine show how firmly the framework of this house is braced, also how easily the different parts slip into place.

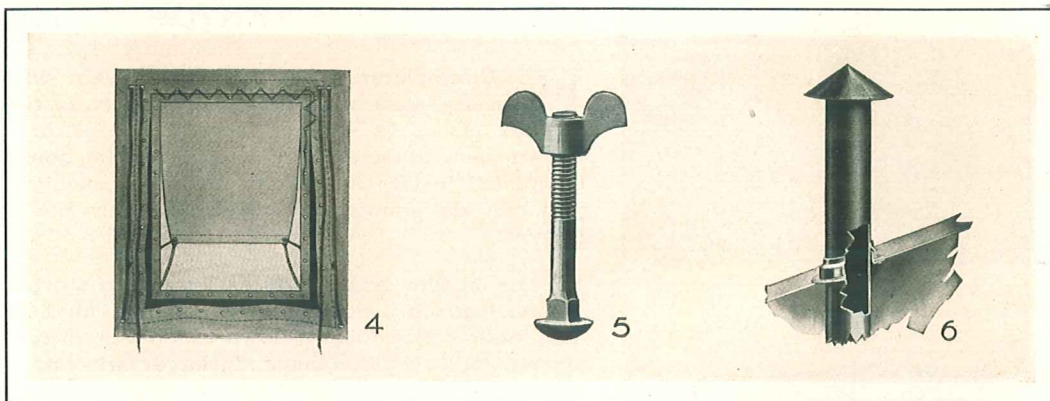

THE JOINTS are called "hook on" and "slip in," and they eliminate the necessity of driving nails or setting screws. Some of the joints used are illustrated above (figs. 1, 2 and 3). All metal parts are sherardized, a process much superior to galvanizing, which make them absolutely rustproof. All metal parts are made secure with bolts and thumb nuts (fig. 5).

THE ROOF, SIDES AND ENDS, all in one piece are of a heavy cotton fabric. This fabric is the best for the purpose that the foremost mills in the United States can manufacture. It arrives at our factory in a raw state and is then treated by us with three distinct processes. First, it is preshrunk to avoid sagging in warm weather, and stretching in a storm. Second, it is dyed a rich brown color, a most pleasing and harmonious shade. Third, it is waterproofed, a process which also preserves, thereby prolonging the life of the fabric, and makes it noxious to insects and mildew. First of all Kenyon Heavy Duty Duck is waterproof, we guarantee it even during days and days of continuous hard rainfall. This material does not absorb dirt and can be easily washed with a hose. The sewing on a Kenyon House Cover is done with an interlocking double stitch, of waterproof thread.

THE WINDOWS are made of fibrelloid, a flexible material, which is just as transparent as the finest plate glass, but cannot break. The windows are easily opened and closed from the inside—when open they are lowered into a canvas pocket.

THE SCREENS are made exclusively of the world famous Gilbert & Bennett rustless pearl wire screen cloth. The illustration (fig. 4) shows how these screens are laced into the window openings, after the manner of the lacing on a gentleman's shoe. By this adjustable method they are always kept taut and tidy.

KENYON TAKE DOWN HOUSE

THE CURTAINS OR AWNINGS serve a double purpose. When raised as a sunshade and when closed as a blind. Metal rods are provided to hold these out as awnings.

THE LARGE SCREEN OPENINGS will be found on all houses except the Number 7, 9, 10 and 14. They make the living room virtually a porch, through which the air has an unobstructed passage way through the house.

THE STORM CURTAINS are attached to the side screens as illustrated (fig. 7). In stormy or cold weather it is a simple operation to raise them, completely filling the screened openings. These curtains contain ample flexible windows, admitting an abundance of light.

THE DOORS are of Georgia pine, filled with our regular rustless screen, and provided with a cover, which can be rolled down in rainy or cold weather. Locks, knobs and keys are furnished.

THE CEILING of cotton drill serves two purposes. It adds to the decorative effect of the interior and covers the framework overhead. It also assists in keeping the house cool when the sun beats directly on the roof by providing an air space overhead, in which the warm and foul air collect, to pass out through the ventilators.

THE PARTITIONS are of the same material as the ceiling and are fastened to the frame work in such a way, that they can be easily and readily detached and taken down.

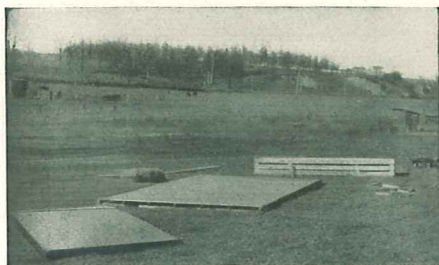

THE INTERLINING is necessary in a house that is to be used all the year around in a cold climate. The material used is dyed duck, which is fitted to the inside framework of the house. This provides a dead air space between inner and outer walls. Many KENYON HOUSE users testify to the comfort secured in using the interlining in the very coldest climates. It is supplied with every KENYON HOUSE at an additional cost of 20%. This interlining must be fitted to your house at the factory and cannot be supplied afterwards. We do not think the interlining necessary except where the temperature goes below 15° Far.

THE CHIMNEY is illustrated at the top (fig. 6) of this page. Its location is shown in the floor plan of every house. It is furnished in the specified location in all of them, except the 7S, 9S, and Lawn Houses, and will be applied to them at an additional charge of \$5.00. A chimney will be furnished at the same charge of \$5.00 at a special location in any house.

THE VENTILATION in the KENYON HOUSE is such that the air inside is constantly changing day and night. The air is drawn in through the screened openings, the screened doors, and the large side openings, is circulated through the rooms, rises at the sides between the edges of the ceiling and the wall, goes above the ceiling and then out through the ventilators.

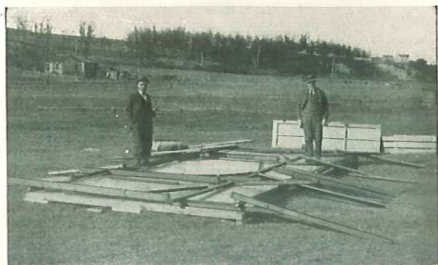

OUR ASSEMBLY DEPARTMENT erects every house complete in the factory before it is sent out. Every part is assembled and inspected rigidly before the final O.K. is given. You may be certain when your house is received that every item is fully up to the printed specification.

KENYON TAKE DOWN HOUSE

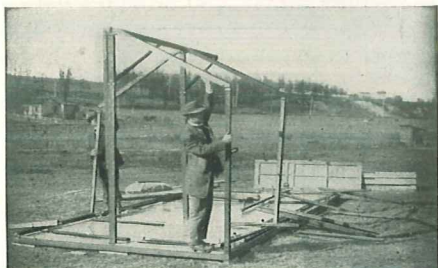

ERECTION OF A KENYON HOUSE

HERE are pictured, from photographs, the simplicity, ease and rapidity of erection of the KENYON HOUSE (a 10S). Although the pictures shown were taken at our factory and the house completed in two hours time by three men, yet you can do almost as well when your house arrives.

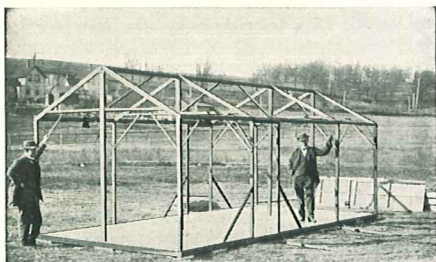

The smaller houses can easily be transported in one load on a small spring wagon. The 14S, 16S and 18S houses, shown on pages fifteen, sixteen and seventeen, demand a larger farm wagon or dray.

Two sets of instructions are furnished with each house, one is mailed to you, the other is packed with the house. These instructions consist of two blue prints, one showing the floor section plans, the other the plan of numbering for the frame.

Besides this there is sent to you a little folder illustrating and explaining every step in the erection of a house. The smaller houses can be put up by two persons. The assistance of a third can be used in the five room buildings.

We discourage the use of a skilled carpenter or mechanic always. Remember a skilled carpenter does not like a portable house. It takes away the means of his livelihood. Put up the house with your own hands, with the assistance of a few tools. You will enjoy the exercise and be amazed at the unique way every part goes together. Follow the photographs on this page and you will readily gain a knowledge of the method of erection.

FIRST—The house has been unloaded and different parts are seen on the ground. Three of the floor sections have been fitted together. The fourth is ready to place. The crate containing frame, bundle of cover, and the screen door is in the background. If extra heavy articles of furniture, such as pianos are to be used, it is well to strengthen the underlay or foundation at that particular point. Where it is deemed advisable, as in marshy lands, to set the house any distance off

KENYON TAKE DOWN HOUSE

of the ground, this is easily accomplished by building a light framework, the exact dimensions of the blue print of the floor, which is furnished with every set of instructions. Under ordinary conditions no foundation is required.

SECOND—The floor has been laid, the sections secured together with our bolt fastening and the frame laid out according to the blue print and instructions.

THIRD—The frame is being joined together, without the use of tools, by two men. Our hook-on and slip-in joints make it possible to secure an absolutely rigid frame, by simply tightening the thumb screws, and not even a wrench is required.

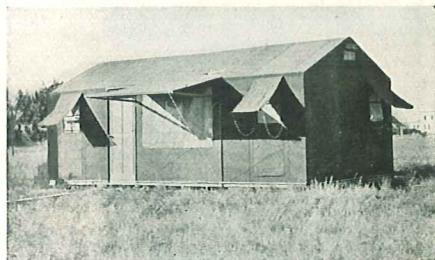

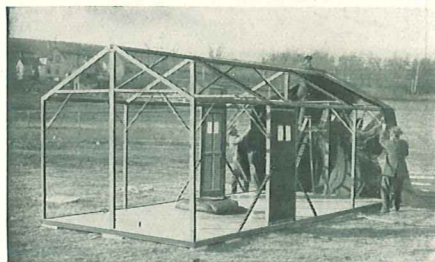

FOURTH—Fifteen minutes later the frame parts have been slipped into place and fastened to the floor. Note the corner and end steel braces.

FIFTH—In five minutes more the doors have been hung in place (notice the screen door covers which can be rolled up if desired) the cover has been unpacked and is being drawn over the frame. This cover is all sewed in one piece so that no tedious and unsatisfactory joining of canvas is necessary.

SIXTH—The cover is being pulled tight over the ridge piece. Kenyon Heavy Duty Duck is so strong that it can be pulled and stretched without fear of ripping.

SEVENTH—The cover is on and being fastened to the baseboard of the floor by one man. The windows are then slipped in from the inside. All windows and awning ropes are put in the house at the factory.

EIGHTH—The KENYON HOUSE is complete with all awnings raised and is ready for occupancy. Notice that with the screen door and with the large screened openings you are able to see clear through the house. This delightful living room is much cooler and better ventilated than a screened porch, since the hot sun never strikes it. It can be instantly closed up to make it as storm-proof as any room in your own house, without effecting in any way the perfect ventilation.

A COZY KENYON INTERIOR

"As you enter the living room of my 165' house you find cream fish-net curtains at the windows, pictures on the walls, a green Crex rug on the floor and Craftsman's furniture, one table, chairs and two rocking chairs. Under the window opposite the door a divan with a bagdad cover and an abundance of pillows and a bamboo sewing table, a small afternoon tea table. On the center table a vase of woodland flowers and so the moment ladies step inside the door they most always exclaim: How lovely---Isn't this artistic?" Mr. W. K. Lyons, Long Pond, Pa.

HOW roomy your house is," instinctively bursts forth from every visitor on stepping into the interior of a Kenyon cottage. You'll be surprised too, when your house comes, to find how much room you have for tables, chairs and lounging places, and how admirably the soft tinted mission interior lends itself as a background for your furnishings.

The partitions, which are of canvas, can be draped back and tied with a cord, or it is the simplest operation to close the room up tight, untying the cord and dropping the folds.

One of the greatest attractions of the house to the wife, is the fact that the household duties are more than cut in half. The KENYON HOUSE means a REAL vacation to the wife as well as to the other members of the family.

The chimney, which is furnished with every home except the one room buildings, is in the living room opposite one of the doors. The price for an additional opening and chimney is \$5.00. If the chimney is not desired, the pipe opening in the canvas can be closed with the water tight cap which is furnished.

A great variety of camp equipment is manufactured which can be used in the interior of a KENYON HOUSE. We suggest the furniture, stoves, etc., illustrated and described on pages thirty to forty-three. We manufacture the furniture especially because it harmonizes perfectly with a cozy Kenyon interior. The other articles we have selected from the best products on the market today. We recommend them and give our endorsement to strengthen the makers' guarantee.

OUTDOOR SLEEPING HOUSES 7S & 9S

AN abundance of pure, fresh air is nature's method of retaining or regaining health. Our outdoor sleeping houses insure just as much fresh air as though you were actually out of doors but eliminate all of the disadvantages.

Either size can be erected in the front or back yard, on the porch, or a flat roof and serve as a comfortable, beneficial fresh air chamber, and a restful retreat on summer afternoons and evenings.

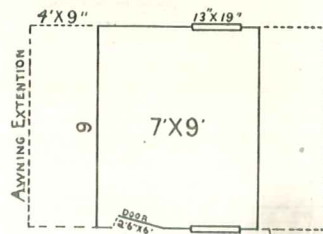

The success of the 7S and 9S sizes is best evidenced by the hearty approval and acceptance tendered them by health resorts, sanitariums and hospitals.

The 7S and 9S Houses also make a very convenient addition to the larger houses, as either a kitchen, bath room or general utility room.

No. 7S. One room 7x9 feet, ceiling 6 feet, 6 inches high, contains one door, floor in two sections, two four-light windows, large full length screened side opening on both sides, provided with storm curtains, operated from the inside, and awnings. Weight 425 pounds. Price complete \$62.50.

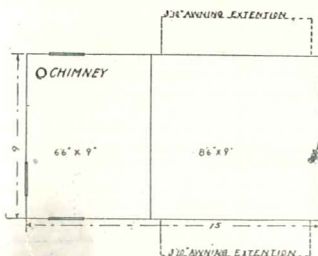

No. 9S. One room 9x12 feet, ceiling 6 feet, 9½ inches high. (This size can be easily changed into a two room compartment by applying a center partition). Contains one door, floor in two sections, two eight light windows, large full length screened side opening on both sides, provided with storm curtains, operated from the inside, and awnings. Weight 600 pounds. Price complete \$85.00.

All prices quoted are f.o.b. Waukesha. Price, freight prepaid to important points of the United States, shown on page forty-eight.

"You will probably be interested to know that the No. 9S house spoken of in my other letter sent to you today stood up under one of the hardest storms and winds, which has ever passed over Maine in years, without injury."
Mr. Daniel R. Hodgdon,
Passaic, N. J., June 1,
1912.

"We are here at the 'Ferris' occupying our little brown cottage, No. 90 which we got of you recently. It came all right and we put it up very easily. It is perfectly rain proof, for we have tested it in two unusually heavy storms and we find it, in every way, cozy and satisfactory." Mr. W. K. Hilton, Mt. Desert Ferris, Maine, July 28, 1912.

POPULAR TWO ROOM HOUSE NO. 90

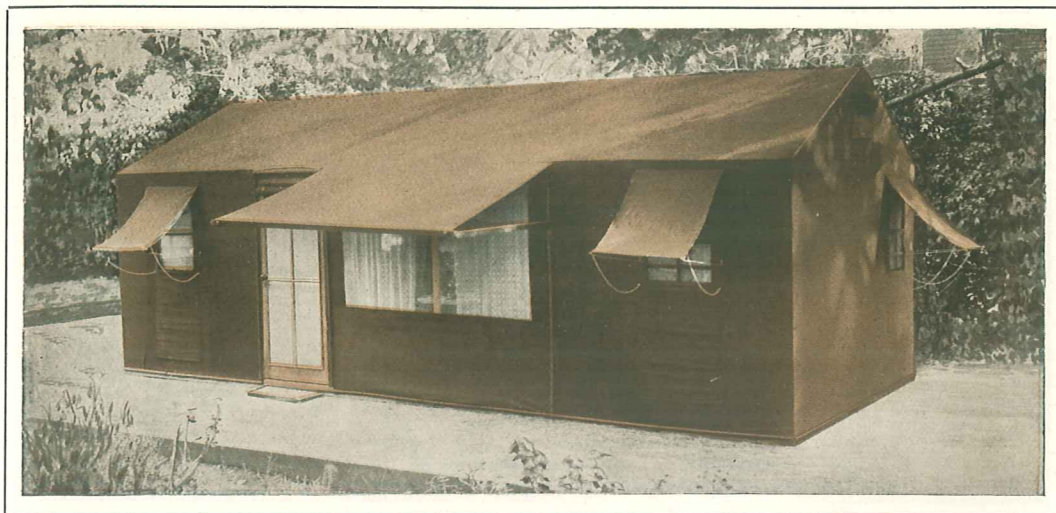

OFFERED for the first time in the spring of 1912, one hundred and eighty of these houses were sold the first season. A full screened living and a sleeping room large enough to accommodate a large sized bed or two single beds, make it an ideal accommodation for two or three persons. This house can be easily equipped with double decked berths if desired.

And not only do these advantages, with its airiness and comfort, make it so popular, but it is so extremely compact that it can be very easily conveyed on a small one horse drawn wagon.

This house has demonstrated its worth as an overflow accommodation in sanitariums. In this case the living room is used for sleeping and the smaller one for a warming room. It has an exceptionally big earning capacity when used for rental purposes at resorts, and is destined to become extremely popular with resort owners and those patronizing the resorts.

Two rooms, total floor space 9x15 feet, ceiling 6 feet 9½ inches high, one door, three floor sections, four windows, a chimney complete and a large screened opening on each side of the living room, provided with storm curtains, operated from the inside, and awnings. Weight 675 pounds. Price complete \$110.00.

All prices quoted are f.o.b. Waukesha. Price, freight prepaid to important points of the United States, shown on page forty-eight.

THREE ROOMED BUNGALOW NO. 10S

A DESCRIPTION of this, the biggest seller in our whole line, is almost unnecessary. If we were to tell you of its popularity and nothing more, it should be enough to convince you of the wonderful value of this little house.

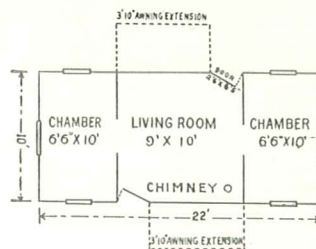

Think of it, a three roomed bungalow absolutely complete for \$155.00.

It's very low price, compactness and lightness in weight, when shipped, and the ample floor space make this KENYON HOUSE an ideal one for use in every part of the world. In fact, this our No. 10S, has become so well and favorably known in the United States and foreign countries that some of the members of the happy Kenyon Family have suggested that we use for our slogan, the phrase that our little three roomed bungalow has made seem most literally true—"Whenever you see a little brown bungalow, it's a KENYON TAKE DOWN HOUSE."

The photograph above shows a No. 10S in California, where KENYON HOUSES are used all the year 'round. Inter-lined, this house can be used by prospectors and fur traders as permanent homes, as far North as the dog sledges travel.

Three rooms, total floor space 10x22 feet, ceiling 6 feet, 9½ inches high, two doors, four floor sections, six windows, a chimney complete and a large screened opening on each side of the living room, provided with storm curtains, operated from the inside, and awnings. Weight 1050 pounds. Price complete \$155.00.

All prices quoted are f.o.b. Waukesha. Price, freight prepaid to important points of the United States, shown on page forty-eight.

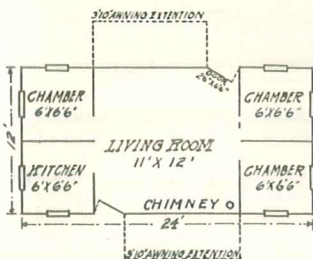

"It is now raining blue blazes, and we also had some hail and wind, but the Kenyon is standing the racket in fine style, and to say that I am well pleased would be putting it very mild, for it sure is a dream."
Mr. E. J. Taylor, Pontiac, Mich., July 29, '12.

SMALLEST FIVE ROOM HOUSE NO. 12S

"I put one of the houses up at Cloud, croft and to say it is a success is only telling the facts. There have been exceedingly heavy storms up there and while many other houses leaked, not a drop entered this house." Mr. F. E. Hunter, El Paso, Texas.

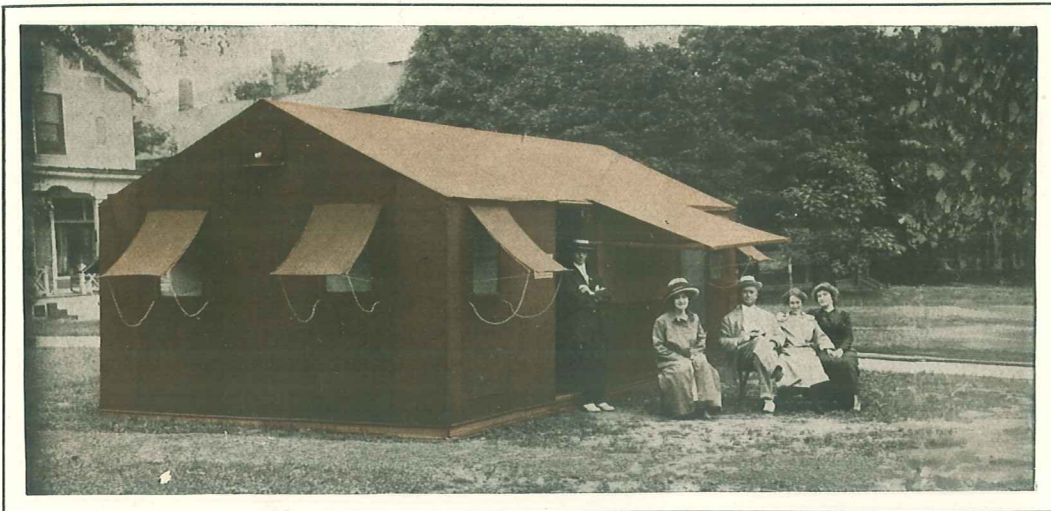

IF the sight of this cozy country home shown above, with four handy little bed rooms and a big cheery living room, with its sides thrown wide open to allow all the outside to enter, yet protected with screens and awnings, and storm curtains when necessary—if the mere sight of it don't make you long to spend the coming summer out of doors, it must be that the love of Nature has never gotten into your veins and you are a stranger to one of the most vivid joys of life.

If your family is small and you want larger sleeping quarters, take down the middle chamber partition and have two big airy sleeping rooms, each 6 feet, 6 inches by 12 feet. Should some friends come in to stay over night, hang the partitions up again and have the original five rooms.

The 12S House, fitted with double deck berths in each chamber, will nicely accommodate a club of eight members. If your means are limited and you have about two hundred dollars to spend for this summer's outing, buy this house. It will be good for a score of summers to come.

Five rooms, total floor space 12x24 feet, ceiling 6 feet, 9½ inches high, two doors, four floor sections, eight windows, a chimney complete and a large screened opening on each side of the living room, provided with storm curtains, operated from the inside, and awnings. Weight 1500 pounds. Price complete \$195.00.

All prices quoted are f.o.b. Waukesha. Price, freight prepaid to important points of the United States, shown on page forty-eight.

FAVORITE FIVE ROOM HOUSE NO. 14S

BECAUSE of its light weight, division into five rooms, generous dimensions and price, this, the 14S house, is perhaps the most popular of the five room houses.

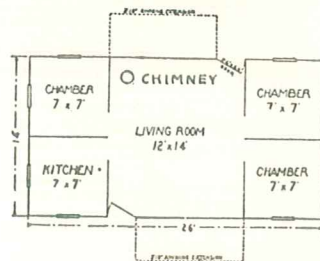

Although the chambers may appear small, they are sufficiently large to contain a double bed and some furniture, while the living room is of ample dimensions making it roomy and cheerful. And when larger space is required the partitions can be removed without marring the interior effect.

Three people can easily erect this house in from five to eight hours. Its broad interior can be made so homelike and cozy that you will be surprised, on entering, to find the walls about you made of duck, instead of wood and plaster.

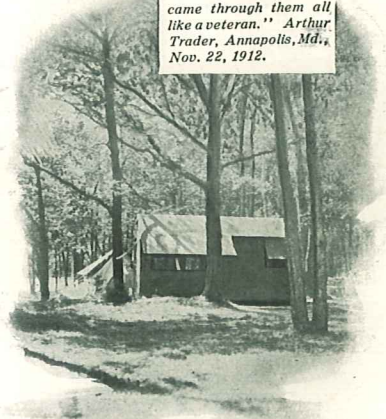

If you have a family of four or five and a bunch of friends who are planning on spending the week-end with you, buy this house and you can live as happily and comfortably all the summer long, as though your summer home is the most elaborate and expensive combination of stone and mortar that could be designed.

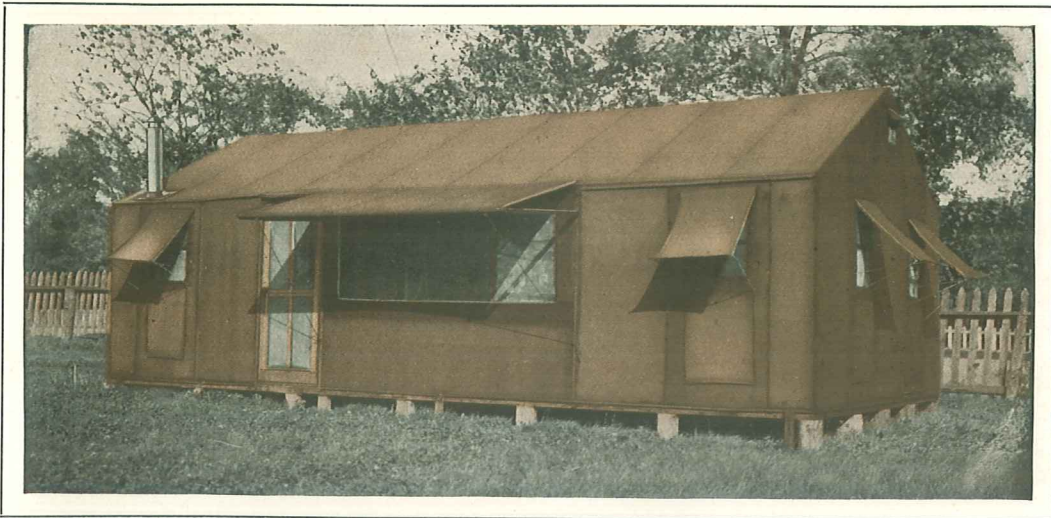

Five rooms, total floor space 14x26 feet, ceiling 6 feet, 9½ inches high, two doors, six floor sections, eight windows, a chimney complete and a large screened opening on each side of the living room, provided with storm curtains, operated from the inside, and awnings. Weight 1685 pounds. Price complete \$225.00.

All prices quoted are f.o.b. Waukesha. Price, freight prepaid to important points of the United States, shown on page forty-eight.

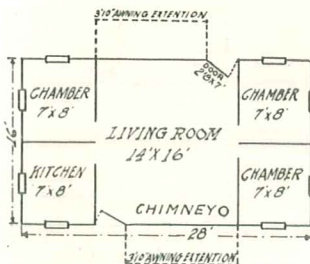

"We are more than delighted with the house and cannot speak highly enough of it, as we had some very severe wind and rain storms this summer, but the house came through them all like a veteran." Arthur Trader, Annapolis, Md., Nov. 22, 1912.

A COMFORTABLE FIVE ROOM HOUSE

"Ever see the picture of a Kenyon Baby?" I've got one and I'll send you his picture to prove it. He had small chances when he arrived in this world, but a year in a "Kenyon" brought him into the 'Prize Class'." Mr. H. E. Russell, Des Moines, Iowa, May 28, 1912.

A NOTHER good sized house is the 16S, almost entirely used as a permanent summer residence. It offers one advantage over the 14S house in that it is two feet longer and two feet wider, thus giving a more spacious interior and larger individual rooms.

To live in this bungalow during your summer vacations is to know first-hand the real enjoyment that comes to the "woodser," who feels that he is an "integral part of the world in which he lives—not a trespasser." Yet you can have all the comforts and most of the conveniences of the most modern flat. The KENYON HOUSE truly combines the freedom of the great out of doors with modern home protection.

Although large in proportion and necessarily in parts the 16S House is extremely portable, easily handled and erected in less than a day. This house is the original size of the S style house and is called by the designer the most practical of the whole line. 'Tis, indeed, a residence to be proud of, as the above photographic reproduction suggests.

Five rooms, total floor space 16x28 feet, ceiling 7 feet 6½ inches high, two doors, ten floor sections, eight windows, a chimney complete and a large screened opening on each side of the living room, provided with storm curtains, operated from the inside, and awnings. Weight 2,050 pounds. Price complete \$270.00.

All prices quoted are f.o.b. Waukesha. Price, freight prepaid to important points of the United States, shown on page forty-eight.

OUR LARGEST HOUSE, NO. 18S

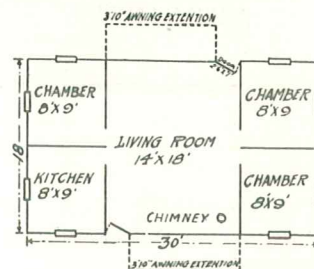

THE maximum of room and comfort is contained in the 18S house, a five room house and the largest of the KENYON TAKE DOWN HOUSES. Exceptionally large families appreciate it most, especially where summer social functions are popular, and where a permanent outdoor residence is required from early spring to late in autumn.

The 18S house can be conveniently hauled, in the ordinary city dray or farm wagon, in one load, and can be easily erected by three persons in a day. If the kitchen, with its noises and fumes is desired remote from the house, one of the small Kenyon houses can be thus utilized and joined to the large house, by means of a four foot canopied floor walk. (Which adds but \$5.00 to the cost of the house and its addition). This does not mar the appearance of the house but increases the room capacity to from six to eight rooms, dependent upon the size of the addition.

The 18S house has been widely accepted and we have yet to hear the first disapproving word against this master creation of the Kenyon portable idea.

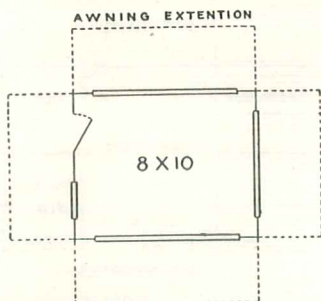

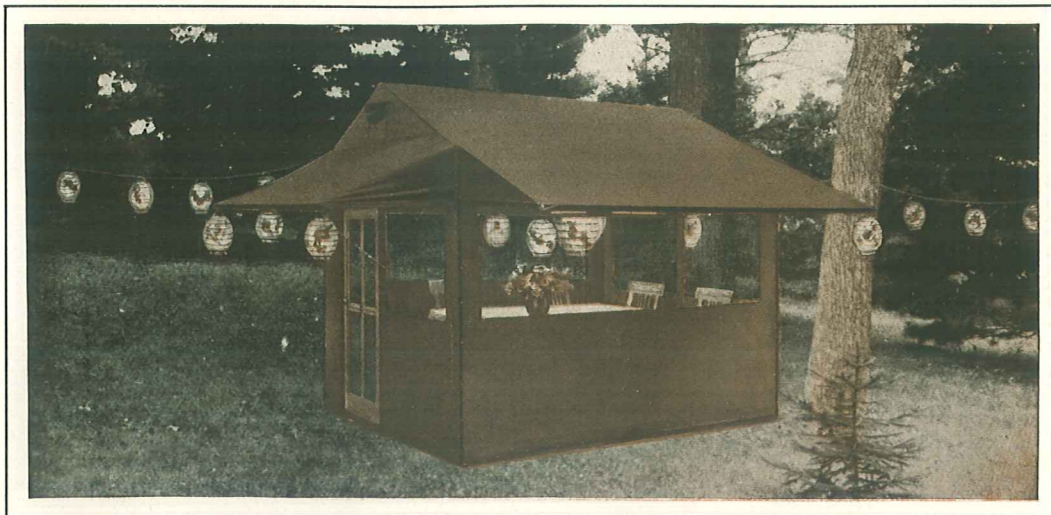

Five rooms, total floor space 18 x 30 feet, ceiling 7 feet 6½ inches high, two doors, ten floor sections, eight windows, a chimney complete and a large screened opening on each side of the living room provided with storm curtains, operated from the inside, and awnings. Weight 2,200 pounds. Price complete \$325.00.

All prices quoted are f.o.b. Waukesha. Price, freight prepaid to important points of the United States, shown on page forty-eight.

"We moved into town about ten days ago, in a sudden cold spell, and have regretted the same ever since. No one knows how much we miss our house and we shall go back to it at the very first opportunity in the spring." The Reo Sales Agency, Charlottesville, W. Va., Nov. 7, 1912.

"I have been thinking for some time that I would write to you and thank you for making a very delightful summer possible for me. The Kenyon House is all you claim for it and it certainly just filled the bill. Mr. Robt. B. Arnold, Richmond, Nov. 27, '12.

THE KENYON LAWN HOUSE

WITH its cement gray sides and tile red roof the Kenyon Lawn House is, indeed, an effective creation. It is a most delightful recess during summer afternoons and evenings for lawn festivals, card parties and social functions, which in summer are more desirable out-o'-doors.

The Kenyon Lawn House in detail and principal of construction is the same as the KENYON TAKE DOWN HOUSE. However, the imposing features about the Lawn House are awnings and screens on all four sides, giving the interior absolute shade, and making it cool even beneath the direct rays of the sun. This house can be erected and taken down in from two to six hours, depending on the size. Being thoroughly weather-proof and sturdy it will withstand, without mar or blemish, exposure throughout the summer, so that once up it can remain so without care or further trouble.

The storm curtains, with which the house is provided, when closed allow absolute privacy, thereby rendering the house ideal as an outdoor sleeping apartment, while its handsome appearance makes it an attraction in any surroundings.

No.	Size	Price	Weight
8	8x10 ft.	\$ 80.00	450 lbs.
11	10x12 ft.	100 00	625 lbs.
13	12x14 ft.	120.00	800 lbs.
15	14x16 ft.	150.00	1050 lbs.

All prices quoted are f.o.b. Waukesha. Price, freight prepaid to important points of the United States, shown on page forty-eight.

HUNTERS AND MINERS CABINS

BEING light in weight and small both sizes of this style KENYON HOUSE are particularly adapted to the requirements of hunters, fishermen, campers, miners, engineers and surveyors, as both can be conveyed very easily over the mountains and through the wilderness. They are very appropriate for one, two or three persons and practical in the colder climates, even without the interlining.

They are entirely closed with the exception of the windows and are snug little cabins, perfectly ventilated.

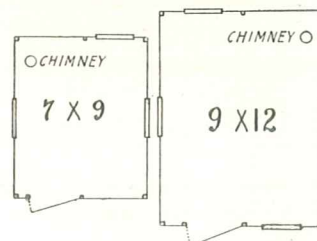

Either one can also be used in addition to the larger houses, as a kitchen, storeroom, servant quarters, etc., while they are "just the thing" as a bath house on the lake or seashore.

These houses have one room and are known as the No. 7 and No. 9, and are the same in material and mode of construction as the other KENYON HOUSES.

No. 7, one room, 7x9 feet, ceiling 6 feet, 6 inches high, one door, floor in two sections, three four-light windows, complete with screens, curtains, awnings and chimney. Weight 420 pounds. Price complete \$55.00.

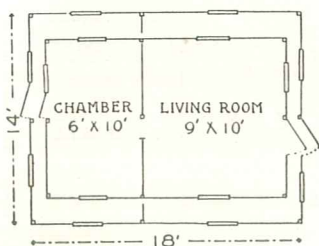

No. 9, one room, 9x12 feet, ceiling 6 feet, 9½ inches high, one door, floor in two sections, four eight-light windows, complete with screens, curtains, awnings and chimney. Weight 625 pounds. Price complete \$85.00.

All prices quoted are f.o.b. Waukesha. Price, freight prepaid to important points of the United States, shown on page forty-eight.

"I think it would be a good ad. for you to say that two of these houses were set up in less than eight hours by parties who never saw but one of them, and without the aid of blue prints or sketch." Westinghouse, Church, Kerr & Co., Savannah, Ga., Oct. 5, '12.

"We lived in the house all winter, and it was one of the longest and coldest winters on record in Iowa. The house stood the wear and tear very well and we are very well satisfied with it." Mr. S. W. Griggs, Chariton, Iowa. June 5, '12.

THE CLOSED TYPE NO. 10 AND NO. 14

THE No. 10 and No. 14 Houses, of the closed type, are designed especially for long time use in colder climates. New settlers going into a location, where timber is scarce and railroad facilities poor, such as on the prairies of Montana and Canada, will find that this type of house entirely answers their need for a permanent home. Contractors too, who have need for shelter only during the night, find this house especially designed for rough usage.

We do not recommend this house for a summer home or camp, because it does not have the bungalow attractiveness nor the ventilation of the "S" style of buildings.

Although not wide open as the other styles, the No. 10 and No. 14 are perfectly ventilated and as extremely comfortable in warmer weather as when cold outside.

With the exception of the side openings these two styles are identical in every detail and advantage of the KENYON TAKE DOWN HOUSE idea.

No. 10 House. Two rooms, total floor space 10x15 feet, ceiling 6 feet, 9½ inches high, one door, three floor sections, six windows, complete with screens, curtains and awnings. Weight 750 pounds. Price \$115.00.

No. 14 House. Three rooms, total floor space 14x18 feet, ceiling 6 feet, 9½ inches high, two doors, six floor sections, eight windows, complete with screens, curtains and awnings. Weight 1150 pounds. Price \$155.00.

All prices quoted are f.o.b. Waukesha. Price, freight prepaid to important points of the United States, shown on page forty-eight.

KENYON TAKE DOWN PLAY HOUSE

A HOUSE for the children just like grown-ups have. It is made of the same material, on the same principle and in the same painstaking manner as the KENYON TAKE DOWN HOUSES are.

As a quiet place for the baby's nap in summer, undisturbed by mosquitos and flies, away from the stuffy room and 'mid velvety breezes, the Kenyon Take Down Play House is ideal. And then, on many of the hot summer days, mother will often find herself in the Children's Kenyon Play House, sewing, chatting, or quietly resting, while father will find in it a quiet retreat with his newspaper during the summer evenings. Hence not only will the Kenyon Play House afford a most advantageous play thing for the children, but the entire family will enjoy a new satisfaction with its presence in the front or back yard.

It is easily erected in one hour by one person, in the same simple manner as the larger KENYON HOUSES are erected. Made in four sizes as follows:

No.	Size	Door	Side Screen Openings	Height of Side Walls	Shipping Weight	Price
1	3-6x5	1-8 x 3-11 $\frac{1}{2}$	1-9 $\frac{1}{4}$ x 3-8	4 ft. 0 in.	130 lbs.	\$22.50
2	4-3x6	1-8 x 4-3 $\frac{1}{2}$	1-9 $\frac{1}{4}$ x 4-8	4 ft. 4 in.	160 lbs.	27.50
3	5-0x7	1-8 x 4-7 $\frac{1}{2}$	1-9 $\frac{1}{4}$ x 5-8	4 ft. 8 in.	209 lbs.	33.50
4	5-8x8	1-8 x 4-11 $\frac{1}{2}$	1-9 $\frac{1}{4}$ x 6-8	5 ft. 0 in.	260 lbs.	42.50

All prices quoted are f.o.b. Waukesha. Price, freight prepaid to important points of the United States, shown on page forty-eight.

"My little girl has not only had a world of pleasure, but has benefited physically through her little Kenyon Play House. It has also been a boon to her mother on rainy days. She wouldn't know what to do without it."
Mr. W. F. Dunlap, Milwaukee, Wis.,
Sept. 30, 1912.

"I have two of your Take Down Houses which were used the entire season and are now in as good condition as ever. They gave excellent satisfaction." Mr. Gustave Pabst, Pres. Pabst Brewing Co., Milwaukee, Wis., Nov. 21, 1912.

KENYON SUMMER CAMP HOUSES

"I have personally examined the Take Down Houses and Camp Furniture and can recommend them for summer and camp resorts, particularly for sportsmen and fishermen, who may wish to establish temporary or permanent quarters. These Take Down Houses are ideal for those wishing to have first-class accommodations in the open, for summer resorts, clubs, families or individuals. We unhesitatingly recommend them to the public in general." Mr. J. G. Lowe, District Passenger Agt., Western Pacific R. R., San Francisco, Cal., Dec. 3, 1912.

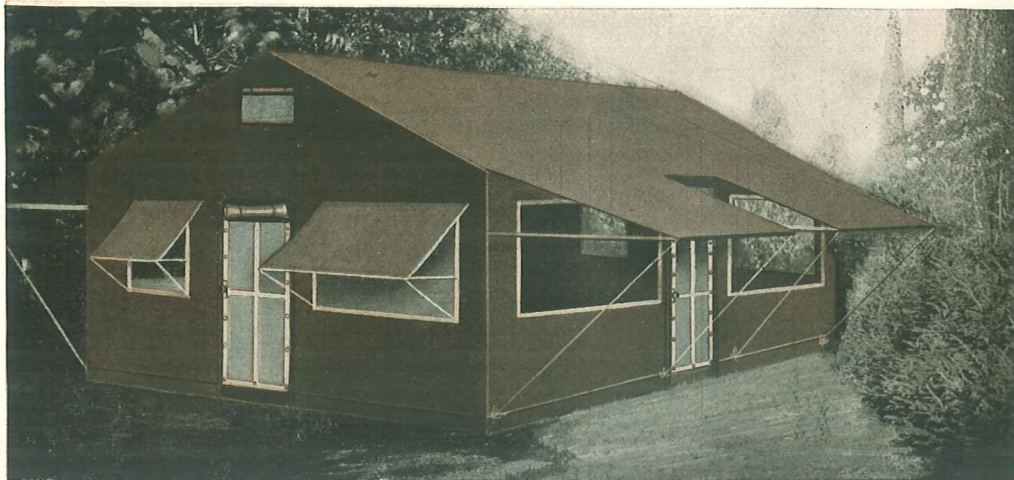

THE photograph above was taken at a lake in the vicinity of Canton, Ohio. The equipment for this camp consisted of two No. 53 Dining Rooms, one used as a dining room, the other as a dormitory, and a No. 9S House used for a kitchen. This type of accommodations was purchased by the Y. M. C. A. Board primarily because of low cost added to the fact that the KENYON HOUSES are so sanitary and comfortable.

The boys can "rough house" all they want. KENYON HOUSES were designed to stand the hardest knocks and usage. The berths we furnish, which can be fitted into any of our houses, are wholly of steel and so strongly made as to defy breakage.

Although our dormitory and bunk houses are made primarily for boys' camps, lumbermen, contractors, etc., there is no reason why any of them can't be nicely used for other purposes.

At a great many points throughout the East, summer camps are being equipped with this elastic style of accommodations. For boys' and girls' camps, babies' summer hospitals, orphans' outing places and club houses, and a great many other uses where people must necessarily be confined in a small space, the KENYON TAKE DOWN HOUSE is unique.

All of our customers who have purchased this type of take down building as a resort proposition, have used it to a profit. It rents on sight and will bring in returns in a single season, rentals enough to more than pay the original purchase price.

KENYON OUTDOOR DINING ROOM

A MORE ideal dining room than this cannot even be imagined. The Kenyon Dining Room is rapidly taking the place of dining tents and wooden eating houses at Chautauquas and Summer Camps.

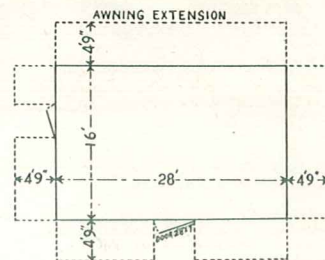

One of the middle spread pictures in this book will give a good idea of the roominess of the interior of a Kenyon Outdoor Dining Room—our No. 51. In this photograph a jolly big group of “big” men are enjoying a dinner inside our smallest dining room. One can sit in the interior and have an unobstructed view of the landscape on all four sides of the house.

All sides are open, screened and shaded by wide awnings, making the interior clean and airy. On rainy or cold days the storm curtains, containing large windows, entirely cover the screened area. These curtains can be lowered or raised from the inside. On page thirty-three of this book, is shown two types of tables designed especially for use in this Outdoor Dining Room. The new chair described on page thirty-five is a substantial folding chair for use in these dining rooms.

If you will state how many people you desire to seat we will recommend a size for your requirement.

No.	Size	Weight	Price	No.	Size	Weight	Price
51	14 x 18 ft.	1100 lbs.	\$175.00	53	14 x 36 ft.	2100 lbs.	\$330.00
52	16 x 28 ft.	2000 lbs	300.00	54	18 x 40 ft.	3000 lbs.	450.00

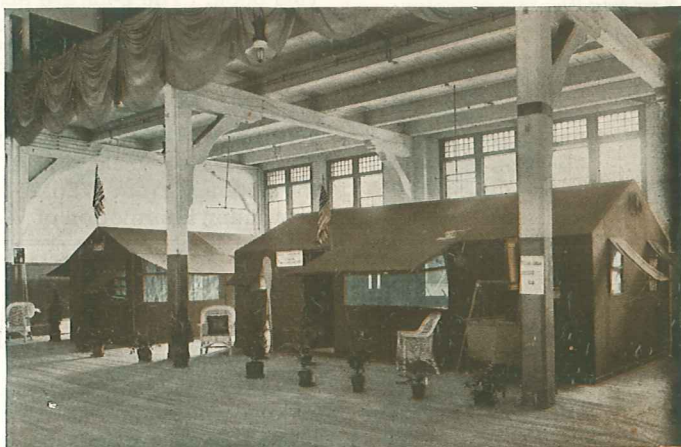

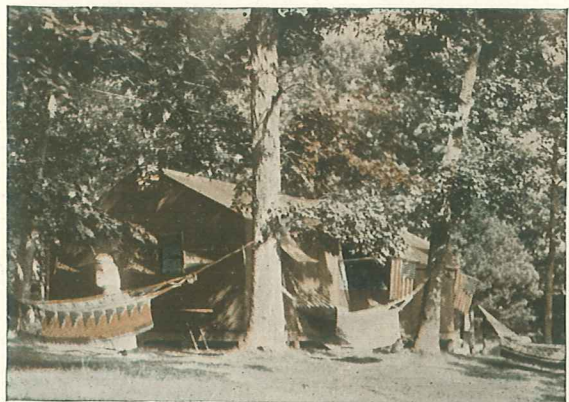

All prices quoted are f.o.b. Waukesha. Price, freight prepaid to important points of the United States, shown on page forty-eight.

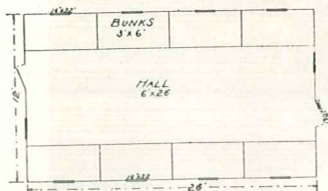

"I regret to say we have no photographs of the house we purchased from you. The young lady for whom the house was purchased, says it is quite satisfactory and she has gotten a great deal of pleasure out of it." Mr. W. H. Browning, Pres. Browning, King & Co., New York, N. Y., Nov. 7, '12.

"Think it is the finest thing I ever saw. We lived in our house this winter and it was warmer than a log house across the road from us and log houses are considered very warm." Mr. Wm. Lehfeldt, Billings, Mont., May 1, '12.

KENYON TAKE DOWN BUNK HOUSES

THE interior of a Kenyon Bunk House is illustrated above. Inside this building six men can be accommodated comfortably, and under more sanitary conditions than in most camps. While the bunk house is primarily designed for miners, lumbermen, grading camps, surveying parties and construction gangs, it can be well used at a summer camp and in connection with the regular summer cottages as an overflow sleeping accommodation.

As shown in the illustration the bunks are the finest quality steel springs, described in full on page forty-one of this book. The beds are arranged in double tiers, the lower one being 18 inches from the floor, and the upper one 4 feet 6 inches high—giving them full head room below.

The double tier bunks can be arranged in any KENYON TAKE DOWN HOUSE at the prices shown on page forty-one. The prices below are for our three sizes of special bunk houses. Two weeks time is required after order is received for shipment from Waukesha. Send for our special folders containing information of value to every contractor.

Bunks Three Feet Wide

No.	Size	House Will Accommodate	Price Springs Only	Price Cotton Mattress	Price Kapoc Mattress
81	14x18 ft.	12	\$186.00	\$222.00	\$260.00
82	12x24 ft.	16	233.00	281.00	340.00
83	14x26 ft.	16	268.00	316.00	375.00

All prices quoted are f.o.b. Waukesha. Price, freight prepaid to important points of the United States, shown on page forty-eight.

KENYON TAKE DOWN GARAGE

HERE is a happy idea for the automobile owner, to be used in conjunction with a KENYON TAKE DOWN HOUSE, or permanently built house.

It is particularly advantageous to the family living in rented property, in an apartment or a flat building, because the Kenyon Take Down Garage can be packed and moved as readily as household belongings. Its portability also makes it a convenience to take along to the mountains, beach, lake and in the country for the summer.

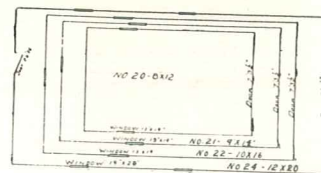

It is more satisfactory in every way than any other kind of Garage, is a neat and sightly structure and costs a great deal less than any other.

It is made of the same material used for our other houses and built on the same lines and as substantially as KENYON HOUSES, therefore, is extremely substantial, absolutely weather-proof and practically fire-proof.

It has a double floor and runway of Georgia pine, windows and a full width door. Made in sizes to accommodate any car, at various prices.

No.	Width of Door	Height of Door	Size of Floor	Weight with Floor	Weight without Floor	Price with Floor	Price without Floor
20	7 ft. 2½ in.	7 feet 6 inch	8 ft. x 12 ft.	750 lbs	300 lbs	\$ 70.00	\$ 54.00
21	"	7 feet 8 inch	9 ft. x 14 ft.	850 lbs	375 lbs	85.00	67.50
22	"	7 feet 8 inch	10 ft. x 16 ft.	1000 lbs	475 lbs	100.00	84.00
24	"	7 feet 8 inch	12 ft. x 20 ft.	1500 lbs	725 lbs	150.00	121.50

All prices quoted are f.o.b. Waukesha. Price, freight prepaid to important points of the United States, shown on page forty-eight.

"We went through some very severe storms this summer, trees within a half mile of us being torn up by the roots but the house weathered the storms all right, when wooden houses near us had the roofs and piazzas torn off of them." Mr. Sherman V. N. Jamieson, Troy, N. Y., Sept. 23, 1912.

"I have visited for two weeks with my daughter, who has a Kenyon Home put up on Cape Cod, this summer. She has had a most delightful summer in the dear little affair. She was a tired out, over worked teacher, when she went to live in the Take Down, and it has proved a great success for her in strength and mind. She seems like a different person. May you be very successful in selling many, for they are a God send to the many who are weak and run down and within the reach of most everybody." Mrs. E. B. Parkhurst, Woburn, Mass., Sept. 2, 1912.

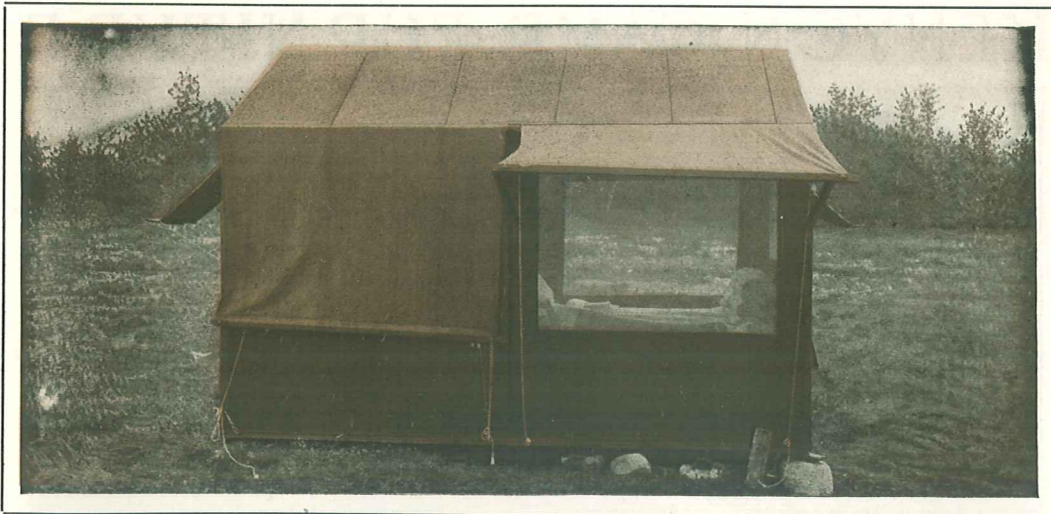

THE CALIFORNIA SUGARIE

OUT in the Western country the people are progressive and are quick to accept new ideas in the way of artistic and useful outdoor abodes. When one of our customers out there asked us to design an Ice Cream Parlor and Delicatessen Shop, we took our 18S house, attached a ten foot addition on to one end, added one foot to the height, put in a front door and some show windows—and there you have it as illustrated above. No better house could be designed for use both winter and summer in that warm country for a store or some similar building. It's unique type of construction attracts a great many people to the inside who otherwise would not become customers.

On the inside you will find that the walls adapt themselves uniquely to interior decorations. It is so easy to keep the interior of a KENYON HOUSE clean that small store-keepers prefer it to permanent buildings. Especially should this type of house prove valuable for a temporary building during the summer months at resorts. At the end of a season's use it can be easily packed away, being ready for use when desired.

The Kenyon Take Down Theatre is the finest portable amusement house manufactured. It can be used to advantage for lectures, moving picture shows, stereopticon entertainments, novelty shows at fairs, street carnivals, etc. This building we equip complete with stage, ticket office, lobby, asbestos lined operating room, two front entrances, each consisting of two double doors, and two side exits.

With the Kenyon take down building your store is not liable to damage and deterioration during six months vacancy.

THE SANITARIUM HOUSES

SANITARIUMS, as a rule, have times during the year when they are very much pressed for additional sleeping facilities. The KENYON HOUSES, either the 7S, 9S or No. 90, can be admirably adapted to answer this need.

The open sides and perfect ventilation allow the users an abundance of Nature's best and cheapest gift, fresh, pure air. The ventilators in the gables, which are open at all hours of the day or night, keep the interior air pure even though the large side openings be closed. The creosoted frame, floor and cover entirely prevent propagation and spread of germs.

Every physician who has ever had an opportunity of examining the KENYON HOUSE has given his unqualified endorsement of it for this purpose.

In the interior ample room is given for an iron bed and cot, a dressing table and a couple of chairs, besides places for hanging clothing and other belongings.

The photograph at the head of this page illustrates how a 9S house, described in the catalog on page eleven, can be divided with a partition and made to accommodate two patients. The illustration shows the awning raised on the outside of one room and lowered over the other. An extra charge of \$7.50 is made when we equip one of our houses in this way.

At the season of the year when regular accommodations at a sanitarium are sufficient the Kenyon House can easily be taken down and stored and need not be thought of again until occasion arises for its need.

"I enjoyed the house for five months, finding it even more perfect than ever you promised. Not a drop of water and it was such a rainy summer. Not an animal of any kind and there were so many rats around, no mosquitos or flies. So very solid when the wind was really dreadful sometimes. My kitchen most comfortable, with electricity. I never can say enough in favor of the house. You know I am 62 years old and all my friends discouraged me, saying I was too old to live in a canvas house, but they all said, when they saw me this fall, that I looked at least fifteen years younger." Madame C. M. Spigaroll, New York, N. Y., Dec. 9, 1912.

KENYON CAMP FURNITURE

THE FEATURES THAT MAKE THE KENYON LINE BETTER

FAILING to find that any camp furniture is now manufactured good enough to be used by the big Kenyon family inside their brown bungalows, we were forced a year ago to manufacture it.

You will find that our prices are no higher than other lines on the market, but if you will notice the photograph on the side of the page, you will see those particulars, in which we know that the Mission Line of Kenyon Camp Furniture excels others.

It is distinctive because of its straight lines, square corners, dark oak stain and harmonious colors. The stain not only presents a handsome appearance but also preserves the wood and adds materially to the service.

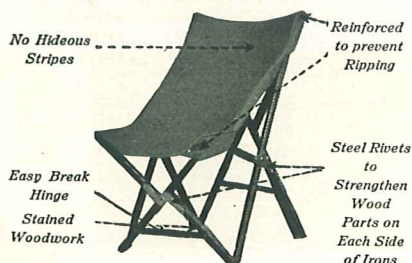

The uniform color of the canvas makes a pleasing combination with the darker wood.

Kenyon Camp Furniture is not hideous with its striped and variegated ticking or awning duck. It is not out of place in the most artistic interior. This furniture can also be used on the lawn, porch or for any purpose where inexpensive, staunch, folding furniture is needed.

Think how simple it is to clean house during the summer when tables can be shut up, chairs doubled, cots folded up and carried easily out doors by one person alone.

To summer in a Kenyon bungalow and to have it fitted with our Mission Line of Camp Furniture is to know real living, because both work and playtime hours are full of pleasure.

Our line in the warehouse is complete and ready for immediate shipment.

KENYON CAMP FURNITURE

THE LAWN SWING

No. 3

WHEN you go to the woods this summer you will find a great many hours during the day when it is good to be out doors for a quiet nap under the trees.

No summer vacation whether at home or in the woods can be called complete unless you have a Kenyon Lawn Swing to make the lazy hours comfortable.

We make only one quality of Lawn Swing, our No. 3, and we cannot improve upon it in durability or finish. Instead of hanging by ropes attached to the sides the points of suspension are on the springs beneath, with heavy rust-

proof chains. Thus the hammock does not soon sag out of shape, as in the case of other lawn swings, due to the stretching of ropes or canvas.

The springs are of extra heavy woven wire, the frame of the spring being tubular, alluminum finished steel. The spring frame at the front has a dip, the spring being retained by a special steel support. This feature adds materially to the comfort.

The cushion used in all Kenyon Lawn Swings is undoubtedly one of its best features. The filling, called Kapoc, is a sanitary, soft, resilient fibre, imported from the island of Java. It makes a cushion which is always soft and comfortable and will not harden, lump or pack.

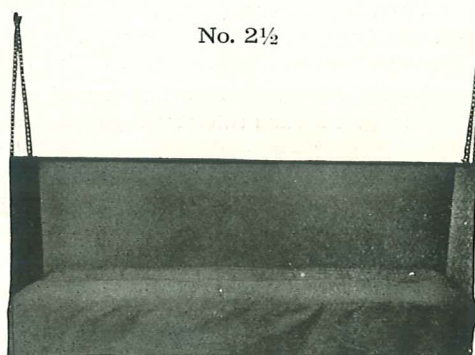

The covering material on the cushion as well as the back and sides is a strong woven double filled canvas, color khaki or olive green. In the ends are pockets for magazines or newspapers.

The back of this swing which we call the wind break, can be easily detached if desired. Our method of fastening this with brass shoe hooks and cord is both unique and practical. In this way the back and sides can always be kept taut.

The frame is of heavy angle iron, so braced and constructed that it can be folded into a small package and be set up in a short time. We can furnish the swing and chains only, or with the frame or complete with the canopy.

Style	Will Support	Weight	Price
No. 2 with frame	1000 pounds	100 pounds	\$16.00
No. 2½ without	1000 pounds	40 pounds	12.00
No. 3 with frame and canopy	1000 pounds	115 pounds	19.00

No. 2½

KENYON CAMP FURNITURE

THE FOLDING COT

A GREAT many times this coming summer when some of your friends unexpectedly make you a call in your little brown bungalow you are liable to feel embarrassed because of limited sleeping facilities. The Kenyon Folding Cot when not in use can be made into a very small bundle and can be tucked away ready for just such an emergency.

No. 1

At all joints where breakage is liable to occur from over-loading extra reinforcing rivets are placed. You may be assured in buying this, our No. 1 cot, that it will hold fully the guaranteed weight, 1000 pounds.

We do not recommend either the No. 1 or the No. 29 cot to be as comfortable as a bed of eider down, but for rough contracting work, overflow sleeping facilities or tent life, it is ideal.

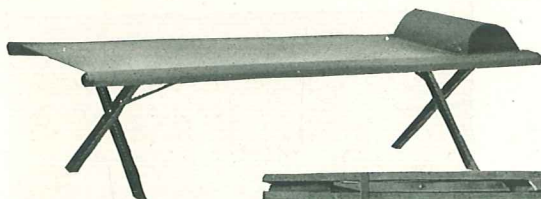

In order to add to the comfort of this cot we are manufacturing a soft resilient pad to go with it. This pad is covered with a good grade of ticking, well sewed with water proof thread. The filling material used is kapoc—the same we use for the Kenyon sanitary mattresses and the cushion in the lawn swing. By far the most satisfactory part of all of Kenyon cushions and pads is the method of fastening in the buttons by means of a non-corrosive metal wire, guaranteed to keep in the buttons forever. This pad weighs seven pounds and costs \$4.00.

The United States government uses this type of folding cot almost exclusively. It is also extensively used in hospitals hotels and summer cottages. When folded the No. 1 cot is in a small package as illustrated. It is made for the roughest usage, and is so light in weight that it can be carried easily. The frame is rock elm, kiln dried and stained. The canvas is No. 10 government woven, dyed a fast olive green.

The No. 1½ cot is very similar to the No. 1 with the exception that the canvas cover and straps for tying are heavier. We recommend this No. 1½ cot where heavy wear is anticipated.

The folding cot No. 29 has no metal joints. The cover used is the same as in the No. 1. It will not fold as compactly, but will give the same length of service. The Nos. 1 and 1½ open are 6 feet and 6 inches long, 2 feet and 3 inches wide and 14 inches high, when closed 3 feet and 3 inches long, 4 inches thick and 5 inches wide.

The No. 29 opened is 6 feet and 4 inches long, 27 inches wide, closed 6 feet and 4 inches long, 2 inches thick and 4 inches wide.

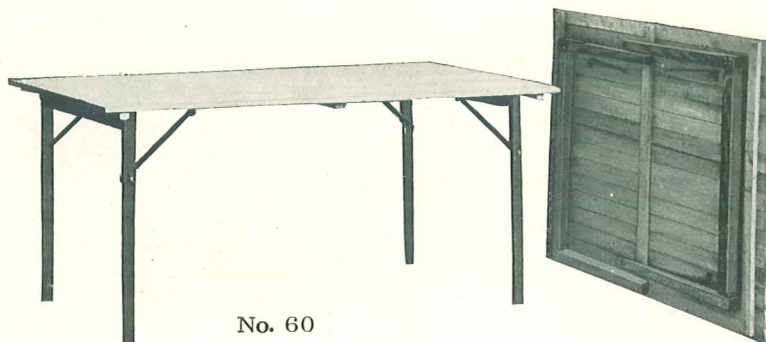

No. 29

Style	Will Support	Weight	Price
No. 1	1000 lbs.	17 lbs.	\$3.33
No. 1½	1000 lbs.	17 lbs.	3.50
No. 29	500 lbs.	17 lbs.	1.80

All cots when folded are secured with tape which is furnished. When shipped they are packed in boxes.

K E N Y O N C A M P F U R N I T U R E

THE FOLDING TABLE

No. 60

A GOOD substantial dining room table is one of the necessities in every home. In manufacturing the tables, which are offered, we have had three main points always in mind, namely: Strength, compactness and appearance.

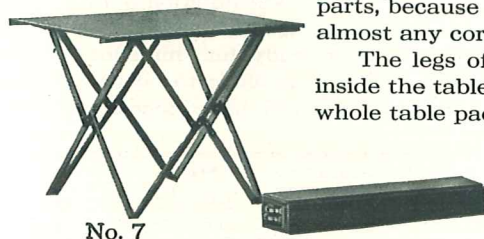

The tops of all the tables are made from selected straight grained, matched, yellow pine. They are finely sanded and all edges and corners are rounded and smooth. Cross braces are placed on the under side of the top to insure strength and rigidity, under almost any conditions. Valspar varnish is used to finish the tops of these tables. This varnish gives a very smooth finish and is not easily scratched. It is not affected by hot or cold water, and will not turn white.

The legs of the tables are also of yellow pine, but they are stained a dark brown mission color. They are sanded and no rough edges are left, such as are usually found in the ordinary camping table. The tops of Nos. 60, 70 and 80 do not fold, being in one solid piece. The legs fold snugly under the top, making a flat package for shipment. Steel braces are attached to the top in an ingenious manner and fasten over a bolt in the leg of the table by means of little slot cut out in the brace which makes it unnecessary to remove the bolt, when setting up the table. The braces are enameled black and the bolts are sherardized. This process renders them impervious to the action of rust.

Any of these tables will serve nicely for sewing or card tables, or in fact any general use.

The No. 60 table is designed for use in the smaller houses, such as the Nos. 7S, 9S or 90. It will seat four people easily. Six people can be accommodated at the No. 70 table, and eight can be seated at the No. 80 table.

The No. 7 is unique in that it can be folded up so compactly in knock down form. It is especially desirable where the traveler means to penetrate the most remote and inaccessible parts, because of its lightness and the fact that it will fit into almost any corner.

No. 7

The legs of the table collapse telescopically and are folded inside the table top which holds them firmly, and in this way the whole table packs so closely as to defy breakage.

Style	Size	Will Support	Weight	Price
No. 60	3 x4 feet	200 lbs.	30 lbs.	\$4 00
No. 70	3 x5 feet	200 lbs.	38 lbs.	4.50
No. 80	3 x6 feet	200 lbs.	42 lbs.	5 00
No. 7	2-6x3 feet	250 lbs.	18 lbs.	3.25

KENYON CAMP FURNITURE

THE COLLAPSIBLE CHAIR

THE popularity of these chairs lies in the fact that they are so comfortable. The canvas cover is attached to the frame in four places only, and consequently it conforms easily to the shape of the person sitting in it.

These chairs are exceptionally strong and durable, made of rock elm with all parts doubly re-enforced at important joints. The fabric used is olive green government duck of double thickness with a re-enforcing strip in addition placed along the middle of the back.

Size	Will Support	Weight	Price
No. 3	300 pounds	6 pounds	\$1.70
No. 4	300 pounds	7 pounds	2.10

No. 3

The top of No. 3 stands 30 inches from the floor. The No. 4 chair is the same, except that the back is 6 inches higher. Folded the No. 3 chair measures 30 inches long, 4 inches thick and 6 inches wide. The No. 4 chair when folded is 6 inches longer than the No. 3.

THE RECLINING CHAIR

THERE is always a need around any camp or on the porch for a real lounging chair. The Kenyon Reclining Chairs are ideal ones for this purpose. They are built exceptionally strong and the mission stained wood and olive drab canvas harmonize nicely with almost any color scheme.

The prices are made very low on these chairs, and yet they give absolute and complete comfort. The chairs are adjustable to four different positions as in a Morris chair and they are built to stand hard knocks. The frame is of selected Rock Elm, which is sanded and absolutely smooth, and the canvas seat is of double thickness. When folded the No. 11 makes an absolutely flat package. The No. 11A is exactly same as the No. 11, with the addition of arm rests. These rests fold up compactly along the sides of the chair, when it is ready for shipment. At all places where breakage is liable to occur because of exceptional over-load, we have placed re-enforcing rivets.

No. 11A

Style	Will Support	Weight	Price
No. 11	400 pounds	10 pounds	\$1.15
No. 11A	400 pounds	11 pounds	1.40

ENYON CAMP FURNITURE

THE GRANDPA CHAIR

No. 35

THE most comfortable and best all around chair in the whole list is the universal opinion about the Grandpa Chair. It is the most elaborate chair we manufacture, and one which you may be proud to have around your camp, home, or den.

Style	Will Support	Weight	Price
No. 35	300 pounds	12 pounds	\$2.25

Canvas parts are exceptionally heavy duck and are dyed a rich olive green color. The metal braces and hinges are enameled with a forest green paint, to harmonize with the color of the duck. The wooden parts are tough grained

Rock Elm and stained a dark mission color. The price is especially attractive on this chair. It can be carried about conveniently, because it folds compactly as is shown in the accompanying photograph. Ample arm rests are provided which add materially to its comfort and have led us to call it "The Grandpa Chair." Young as well as old will heartily endorse this chair as the easiest and best made.

THE NEW DINING ROOM CHAIR

IT is our desire to make a leader out of this chair. Up to the present time there has been nothing on the market corresponding to the ordinary dining room chair. The usual camp chair is too low and flimsy to be used for a dining chair. Because we make the strongest camp dining table on the market, we have had to make a chair to correspond and match it in strength. It is made the correct height (about 2 inches higher than the ordinary camping chair). The frame is made up of extra large size pieces very strongly riveted together. It is nicely sanded, and is a strong serviceable chair. Heavy canvas is used in the seat, making the chair one that will stand up under heavy service year after year.

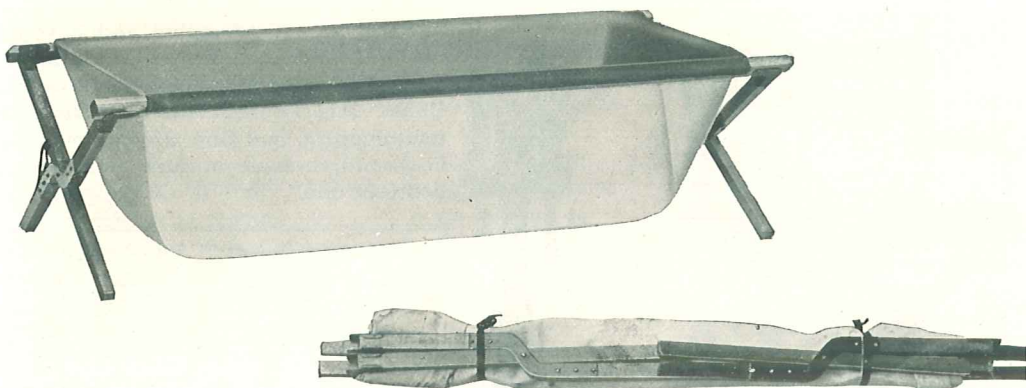

Style	Will Support	Weight	Price
No. 10	250 pounds	8 pounds	.80

No. 10

K E N Y O N C A M P F U R N I T U R E

THE COLLAPSIBLE BATH TUB

THIS article of furniture fills a distinct need in the home or camp. Its value is especially apparent, since it can be folded into a small space and easily stored away when not in use. A bath tub in any home is a bulky proposition, taking up a large amount of floor space. This Kenyon Folding Bath Tub is an economizer of space and worth three times its cost. The frame work is selected rock elm, stained with our distinctive mission color. The fabric is firmly attached to the frame and when partly full of water rests on the floor. The weight of the person in the tub therefore is supported by the flooring and does not strain the fabric of the material out of which the tub is made.

The tub proper is made of a very heavy rubberized canvas which will last a great many years with ordinary care. It is strongly re-enforced at all corners and is soft and flexible so that it folds into a small bundle.

It is almost a necessary adjunct in connection with the KENYON TAKE DOWN HOUSE, as it can be used in one of the smaller rooms and then folded up and the bathroom has vanished.

The tub at the top measures 5 feet long by 27 inches wide and is 16 inches deep. When folded it is 5 feet long and 5 inches square.

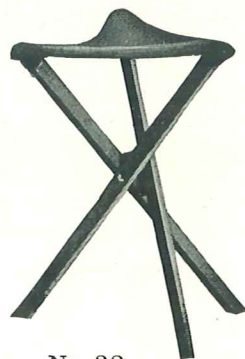

Style No. 20 will support 300 pounds, weighs 16 pounds, price \$9.00.

THE THREE LEGGED STOOL

THE Kenyon tripod is the baby of the line, and as such is the most popular. When folded it can be tucked under the arm and carried as easily as an umbrella. This stool is superior to the regular four legged stool of the same variety which is on the market. It is just as solid and comfortable.

All parts of this stool are finished in the highest standard of Kenyon quality. The canvas is a heavy closely woven fabric, doubled at the three corners and fastened in such a way as to make ripping impossible. This stool is especially desirable for usage at concerts, parades and on fishing trips.

Style No. 32 will support 300 lbs., weight 2 lbs., price 30 cents.

No. 32

KENYON CAMP FURNITURE

THE FOLDING STOOLS

THE four stools pictured and described on this page are constructed for a wide variety of uses. Especially can they be used for conventions, chautauquas, ball parks and big gatherings, where a light, yet strong chair is demanded. These four articles are the biggest sellers in our whole line.

The secret of strength in the chairs No. 5 and No. 6 lies in the shape of the irons placed on the side of the legs. When a person sits on the chair, it causes downward pressure on the legs, and a point of strain at the pivot in the center. The iron placed at the center is so shaped that it distributes the strain instead of throwing it upon one point of the wooden legs or a rivet pin which is ordinarily put there.

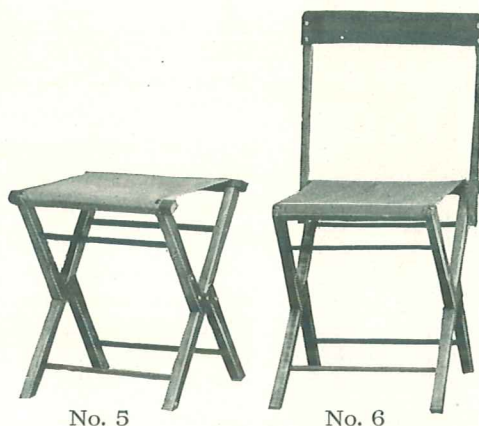

The No. 5 has our regular "slick folding" joints, and is constructed of Rock Elm stained the same as our other furniture.

The No. 6 is exactly the same as No. 5 with the addition of a strong and comfortable back.

Chairs No. 27 and No. 28 are manufactured in response to a demand for a low priced camping chair. They are sturdy in appearance, and a good value for the money.

The frame is all sanded and mission stained. Drab colored canvas is used for the cloth parts and this is securely fastened with rust proof tacks to the frame.

In a Kenyon House any of the stools described on this page are invaluable for use in the living room and, in some cases, for dining room chairs, although we recommend the dining room chair, shown on page 35, as more comfortable for this purpose.

No. 5

No. 6

No. 27

No. 28

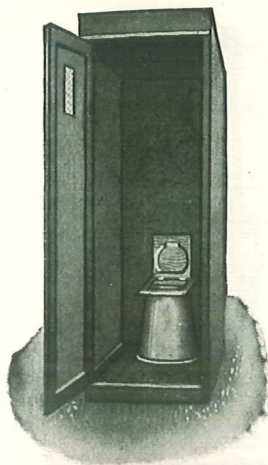

You will find a great many opportunities to use them also on your lawn, in the woods or as extra seats in a launch or rowboat.

No. 28 chair is the same as No. 27 with a back added. When folded for carrying the No. 5 and No. 27 measure 21 inches by 3 inches by 14 inches. The No. 6 and No. 28 measure 21 by 4 by 14 inches.

Style	Will Support	Weight	Price
No. 5	500 pounds	3½ pounds	50 cents
No. 6	500 pounds	4½ pounds	75 cents
No. 27	350 pounds	4 pounds	35 cents
No. 28	350 pounds	5 pounds	50 cents

KENYON CAMP FURNITURE

KENYON PORTABLE TOILET

Kenyon Portable Toilet,
Open

THE illustration gives a fairly good idea of the Toilet. It is 6 feet, 6 inches high with a total floor space of 30 x 38 inches. It is made of the same material and in the same way as the KENYON TAKE DOWN HOUSE. The heavy water-proofed fabric covers a sturdy frame secured to a finished floor.

The Toilet is anchored to the ground by stakes which bolt to the flooring.

This building is very simple of construction, can be set up complete in an hour's time, and is guaranteed storm and weather resisting.

It is necessary to dig a pit about 18 inches square and 3 or 4 feet deep over which the toilet is placed. It cannot be used in connection with a water flushed sewerage system. A galvanized steel hopper is placed over the hole in the floor and nailed to the flooring. A hinged seat fits over the top of the hopper.

The Toilet has a door on spring hinges, with an inside catch and a screened opening near the top.

It is a sightly structure, perfectly substantial, absolutely sanitary, and thoroughly practical.

Toilets are shipped with almost every KENYON TAKE DOWN HOUSE, going to points where sewerage accommodations cannot be had.

Shipped in a small bundle, weighs 110 pounds.

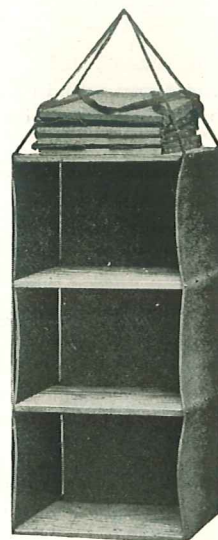

Price, complete as illustrated, \$12.50, f.o.b. Waukesha.

THE FOLDING CUPBOARD

A FOLDING CUPBOARD is almost a necessity in every camp. The sizes listed below are suitable for dishes, food or clothing. This cupboard is so strongly made that it will hold any quantity of articles and bric-a-brac that usually collect around a summer camp. The shelves are of a good quality of light wood, joined together by a canvas back and sides, bound and stayed with black webbing.

When folded, as shown on the top of the open cupboard shown here, these cupboards take up a very small amount of space, hence are usually included with orders for inside fittings for KENYON TAKE DOWN HOUSES.

Style	Weight	Price
No. 40—10 in. wide, 30 in. high, 3 shelves.....	7 pounds	\$1.00
No. 41—14 in. wide, 30 in. high, 3 shelves.....	9 pounds	1.50
No. 42—18 in. wide, 40 in. high, 4 shelves.....	12 pounds	2.25

KENYON HOUSE FURNISHINGS

THE ROWE SANITARY LAVATORY

Complete Outfit

It comes in a small package and is ready for use the minute after being unpacked.

The complete Lavatory is shown in the illustration above, as it looks when in actual use. The Cabinet is solid oak, highly polished. It has a 12 x 16 inch mirror on the front of heavy French plate glass. The tank which is contained inside the cabinet, has a capacity to completely fill the basin with water nine times.

The basin is heavy white vitreous porcelain, seventeen inches in diameter. Included with the basin are soap and glass holders and a faucet. All metal parts are nickel plated.

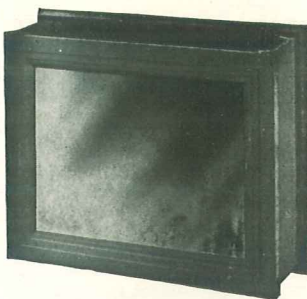

The pedestal is made of Apollo galvanized sheet steel, absolutely unbreakable, rustless and finished in white enamel. Enamel is baked into the metal and gives a very hard and glossy finish, which matches the appearance of the porcelain basin. The pedestal not only acts as a retainer for the waste water but also adds to the attractiveness of the complete lavatory.

The cabinet stands 5 feet 8 inches from the floor so that any adult can easily fill the tank without resorting to the use of a chair or box.

Boxed and ready for shipment at a price of \$16.50, f.o.b. Waukesha.

ALTHOUGH the mention of a tin washdish and a bit of looking glass tacked up on a tree carries with it a pleasant thought of rustic simplicity, yet most of the members of the big Kenyon family who enjoy the many conveniences afforded in one of our little brown bungalows have an instinctive desire for cleaner and neater toilet arrangements.

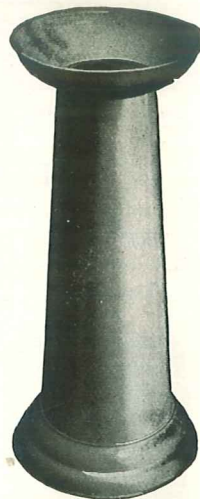

To provide for this demand we offer the Rowe Sanitary Lavatory, a neat, attractive arrangement which provides running water in any room, at any time, without plumbing. It can be quickly attached to the walls of a Kenyon House with a bracket, which we furnish at no extra cost. It requires no plumbing, no pipes, no holes in the floor or walls.

The Cabinet

The Pedestal

KENYON HOUSE FURNISHINGS

DELTOX GRASS RUGS

Pattern 70X

Pattern 61X

WOVEN Grass Rugs have proven very serviceable and attractive for use in KENYON TAKE DOWN HOUSES. They are sanitary, light in weight and harmonize nicely with our general scheme of cool and comfortable summer living.

DELTOX is made from very tough wiregrass fibre, held together by a chain of first quality cotton warp. It is a long, tough, jointless stem of great strength and is used in its natural color.

The warp is colored with an absolutely fast dye. These rugs are purchased direct from the manufacturers in large quantities, whereby we obtain the lowest possible price.

Rugs in stock in both brown and green color. We can ship any rug, in the two patterns shown, the same day your order is received. If special sized or different rugs are desired we require three days extra time to secure the same from the manufacturers. Send for our special Grass Rug Book, illustrating in three colors, a great many exclusive patterns in DELTOX GRASS MATTING.

Size	Designed for	Price
27 inches by 54 inches	Chambers	\$.85
36 inches by 72 inches	Chambers	1.50
54 inches by 90 inches	Nos. 7S, 9S and 90	2.90
8 feet by 8 feet	Nos. 90, 10S and 12S	5.85
8 feet by 10 feet	Nos. 12S and 14S	7.25
9 feet by 12 feet	Nos. 14S, 16S and 18S	9.65

THE LIFE PRESERVER PILLOWS

THE Kenyon Pillow while essentially a life preserver, is the best little comfort maker you can imagine to use around your home. It is soft, sanitary and resilient—made in plain and Spanish Artificial Leather—tan, red and green. As a life preserver, it is guaranteed to support the heaviest person in water for forty-eight hours. It is an article quite essential to be used in your launch or boat—and as a shock absorber in an automobile it is invaluable.

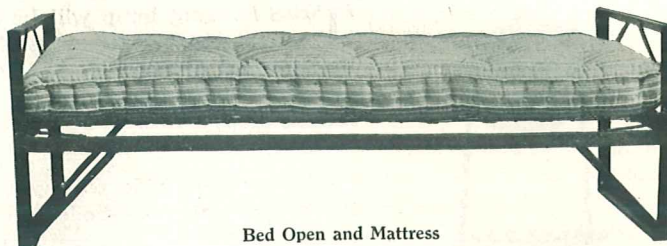

The Kenyon Life Preserving Pillow is filled, to a four inch thickness, with imported, silky, non-absorbent fine fibre down, which makes the pillow exceptionally resilient. When sat upon it yields to the weight of the body slowly, and sinks gradually into soft comfort that no other pillow made can offer. Price, \$1.25 each.

KENYON HOUSE FURNISHINGS

THE FOLDING BED AND MATTRESS

ONE third of your life is spent in bed. Why not spend that time comfortably? The majority of owners of KENYON HOUSES have found that the beds which we sell and mattresses which we manufacture are ideal ones to be used not only for their summer camps but also in their permanent homes.

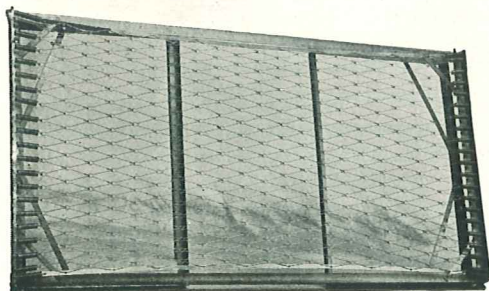

Bed Open and Mattress

The springs are woven steel wire, with a sturdy non-breakable frame. Extra tubular springs at each end help toward the flexibility of the wire fabric. In shipping, the legs and head fold, making a compact package.

The Kenyon non-absorbent mattress is a revelation to the camper or summer home dweller and will outlast the common cotton, and the more expensive hair mattress twice. It costs you no more in the first case and less than half in the latter. It is infinitely more comfortable, more resilient and more sanitary. The filling is Kapok, a fibre floss which we import from the island of Java. The ticking is eight ounce. Our mattresses are tied closely with buttons fastened in with our patent "never pull out button." We guarantee that the buttons, once in, are in forever. Pillows filled with this sanitary silk floss we can furnish also Price, 20 x 26 inches, \$1.50 each.

Style	Size	Price	Weight
No. 15	6 feet x 2 feet 6 inches	Complete	48 pounds
		Spring only	30 pounds
		Mattress only, 3½ inches thick	18 pounds
No. 16	6 feet x 3 feet	Complete	59 pounds
		Spring only	35 pounds
		Mattress only, 4 inches thick	24 pounds
No. 17	6 feet 4 inches x 4 feet	Complete	70 pounds
		Spring only	40 pounds
		Mattress only, 4½ inches thick	30 pounds
No. 18	6 ft. 4 in. x 4 ft. 6 in.	Complete	83 pounds
		Spring only	48 pounds
		Mattress only, 5 inches thick	35 pounds

The illustration here shows the springs without the legs, as we furnish them as single and double berths in any of the sleeping rooms of the KENYON HOUSES. The head rest and foot attachment we furnish at no advance in price over that shown for beds on this page.

Bed Folded Showing Springs

On page twenty-six is illustrated one of our No. 90 Houses, equipped with double deck berths. It is often found, especially where a large family is going to occupy one of our three room or smaller five room houses, that it is the most practical to have the house equipped, at the factory, with these double deck berths.

KENYON HOUSE FURNISHINGS

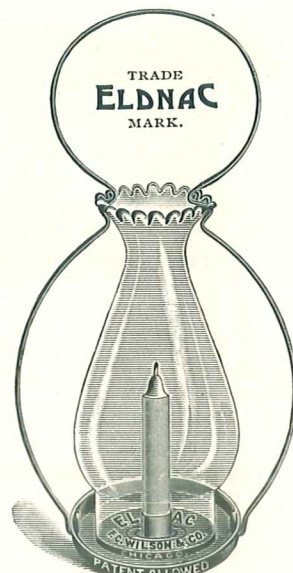

THE HANGING LAMP—THE CANDLE LAMP

THIS hanging lamp will be found most convenient to use in the living room of any of the KENYON HOUSES. It can be hung from the middle cross arm with a hook, which is furnished.

Being adjustable to any height, it will be found an excellent reading or dining table lamp, or can be raised high to admit of a generous illumination of the whole interior. The frame and chain are of mission brass and the lamp is furnished complete with smoke bell, white shade and globe. Price, complete as illustrated, \$3.40.

The candle lamp, shown here, is especially designed to be used in the chambers or kitchen of a KENYON HOUSE. It is clean, convenient and cheap and is so constructed that it

will remain lighted, without flickering, in the heaviest wind. Complete with eldnac frame, globe and one candle, 20c each.

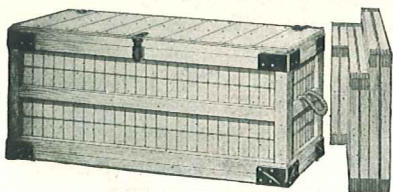

THE COMFORT CAMP HEATER

This little heater is an effective "air tight" wood burning heating stove, in which fire can be controlled to keep over night. It will be found a much needed addition to the KENYON HOUSE, especially where the house will be occupied late into the fall. The stove is made of medium weight sheet steel and is so strongly re-enforced that it will give constant usage for a great many years. The 5 inch stove pipe, which is furnished, telescopes and can be packed inside the fire box for shipping. Size 15½x12x15 inches—weight 24 lbs. Complete with covers, lifting handles and stovepipe, \$6.00.

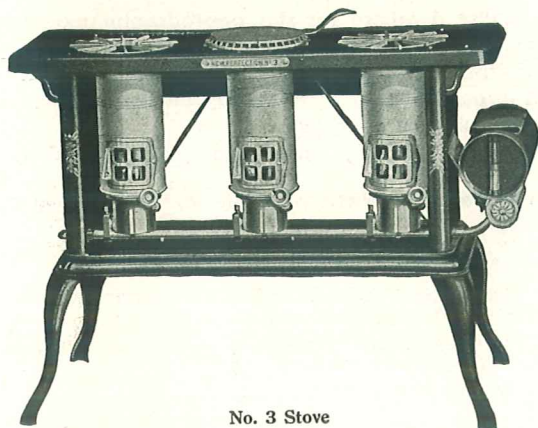

THE CAMPING CHEST

The Camping Chest is invaluable to the summer resorter or camper, as a receptacle in which to ship provisions, cooking utensils and clothing. It is very strongly constructed of tough wood slats, tightly woven together with strong galvanized wire and stapled on to strong dovetailed frames. Furnished complete with hinges, handles and hasp. Inside measurements, 39 inches long, 16 inches wide, 15½ inches deep. Weight 40 pounds. Shipped in knock down form, \$2.50 each.

KENYON HOUSE FURNISHINGS

THE OIL STOVE AND GLASS FRONT OVEN

No. 3 Stove

WHO does not know the difficulty of the housewife, who tries to do her cooking during the summer on an ordinary gasoline stove?

We believe we have found in the New Perfection Wick Blue Fil O amel Stove, the real article for cooking purposes. The fuel used is kerosene, which is less expensive, less dangerous—and much more satisfactory than gasoline.

You will find that it costs only half as much to operate one of these New Perfection Wick Blue Flame Oil Cook Stoves with kerosene oil, as it does a gasoline stove with gasoline, and one-third less than it does a gas stove with manufactured gas.

Not only does this stove do every thing that any other stove, coal, gas, or gasoline will do but it does it quicker, better, at less cost for fuel, and is big enough and powerful enough to do all you would ever ask a cooking stove to do, and best of all it does its work without overheating the kitchen.

We recommend this stove to Kenyon House Dwellers, because it is the only strictly portable stove that is good enough, to give perfect service year after year.

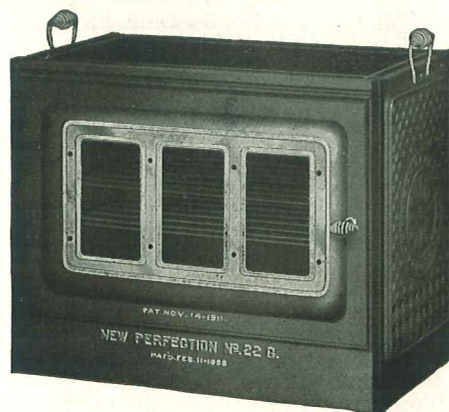

The original purchase price may be slightly higher than the common stove, but you will find that it is the cheapest in the end. Stove No. 2 has two burners, No. 3 has three burners.

The Glass Front Oven is not a toy or a makeshift, but is a scientific apparatus that will bake biscuits, cakes, pies, and will roast meat, not only as good but better than a great many coal ranges.

The oven is mechanically perfect. The racks are narrower than the door and may be changed from one shelf to another without being tipped.

The No. 21 Oven is to be used with the No. 2 burner stove while the No. 22 with the three burner. Both ovens and stoves are in stock at our factory and can be shipped the same day your order is received.

Number	Size	Price
No. 2	13 in. wide, 27½ in. long, 31 in. high	\$ 8.75
No. 3	13 in. wide, 37½ in. long, 31 in. high	10.00
No. 21 G. Oven	14 in. wide, 12 in. deep, 18 in. high	2.75
No. 22 G. Oven	21 in. wide, 12 in. deep, 18 in. high	3.25

No. 22 Glass Front Oven.

KENYON TAKE DOWN HOUSE

SOME OF THE MEMBERS OF THE KENYON FAMILY

WE are indebted to the following KENYON HOUSE dwellers for the photographs used in this booklet. Hundreds of other pictures, almost as good, are on file. This has made the operation of elimination and selection a difficult one. To these and all others of the happy Kenyon Family, who are furthering and expanding our business by cheerful recommendations to their friends, we wish to express our sincere appreciation.

KENYON TAKE DOWN HOUSE

SELLING TERMS OF KENYON TAKE-DOWN HOUSES

ALL prices quoted in this catalog are NET—no discount. Our prices to individual are the same; to one and all alike: 25% of purchase price must accompany order, balance payable by sight draft against bill of lading when goods are shipped.

It is no reflection on anyone's credit that we insist upon your compliance with these terms. To those with satisfactory commercial standing our terms are 2% in ten days, net 30 days.

No charge is made for boxing and cartage and all shipments are f.o.b. Waukesha., Wisconsin, from which point the consumer pays the freight.

Page 48 contains tabulated list showing prices on each house delivered at the principal points in the United States.

Our responsibility absolutely ceases when we deliver goods to the transportation company for shipment, but we will willingly render any possible assistance to the customer in locating delayed shipments.

RAILROADS FROM WAUKESHA

Shipments are made from Waukesha by three railroads, the Chicago, Milwaukee & St Paul; Chicago & Northwestern, and the Soo Line. All connecting with one day's service with the great trunk lines out of Chicago. If you have any particular preference of railroad, please inform us.

PREPAID STATIONS

In making shipments to prepaid freight stations, we must have remittance for full amount of freight in advance.

WHEN YOUR ORDER IS RECEIVED

Shipments are invariably made from Waukesha the same day your order is received. If our factory should happen to be temporarily out of any number, we will notify you of it at once. In any case a delay of only a few days will be necessary. In wiring your order use the code on the following page. Always inform us that 25% of the amount has been mailed.

WHEN THE GOODS ARRIVE

Be sure and check all packages against bill of lading at the depot. A part of the shipment might be mislaid or miscarried and you may save yourself much inconvenience in taking this precaution.

RECOMMENDATIONS

The recommendations on the preceeding pages are all unsolicited. You will notice that they come to us from diverse points of the United States, and that each one has been received during the past season. These are only a very few of the warm words of praise which we have received from the owners of the little brown bungalows, KENYON TAKE DOWN HOUSES, during the past season.
